2005–2006 Seminar Series

A practical application of a Service Oriented Architecture

By

Ronald Surette & William Bembridge

Atlantic Canada Opportunities Agency

Monday, April 24th, 2006
1:30pm
ITC317

The presentation will focus on how new emerging technologies based on service oriented architecture are enabling the Atlantic Canada Opportunities Agency to dramatically change its development methodologies. In addition to lowering costs, this change facilitates the development of solutions that better meet the need for agility found in today's changing business environment. We will demonstrate how the Agency has been successfully using XML and web services to loosely couple business processes to new and legacy information systems.
In addition to providing direct benefits, the strategy has enabled ACOA to prepare for the larger enterprises architecture project of the Government of Canada
