

Faculty of Computer Science 2006–2007 Seminar Series

Computer Science and Internationalisation at Bergen
University College, Norway

By

Svein-Ivar Lillehaug

Visiting Professor from
Department of Computing within the Faculty of Engineering
Bergen University College, Norway

Monday, November 20th, 2006

3:35pm

ITC317

Internationalisation and student exchange has become a hot topic within European higher education, and the numbers of students 'in and out' are now among the parameters for measuring the quality of a program. UNB has internationalisation agreements with both Bergen University College (BUC) and University of Bergen (UoB) in Bergen, Norway. In this presentation you will get a general overview of the Norwegian educational system, the European standardisation of its higher education and the motivation for doing so, the various programs offered at BUC as well as Computer Science related programs at UoB. Then I will present more details from the Computer Science program at BUC with a particular focus on possibilities for exchange of students and faculty. Finally, and as a follow up to Jane Fritz's seminar last week, I will say a few words about our organisation of student projects that can be seen as one way to introduce undergrad students in to an academic or industrial 'research' direction.

The presentation should also be of interest to students that are considering taking a term in a foreign country.

STUDENTS ARE ENCOURAGED TO ATTEND
